5 Years

\$57–\$230

Price Range

$R^2 = 0.76$

Model Fit

Prices & Market Share

Average Price by Brand (2019–2023)

Price trends: Cuisinart is around \$215-\$230. This position means it is considered a premium brand compared to the rest. Most other brands lie between \$75 - \$150.

Brand Market Share (2019–2023)

Share dynamics: GoWise USA drops from 29% to 5%. Instant Pot rises from 1% to 22%. Cosori and Ninja grow steadily. This shows that demand shifts quickly, meaning that brand loyalty is low.

Ratings Over Time

Average Rating by Brand (2019–2023)

- **High quality floor**
All 10 brands stay above 4.3 stars throughout. Consumers are pretty satisfied across all of the prices. This shows the maturity and quality of the competitive market.
- **Ninja leads at 4.74 stars**
Ninja leads with the highest ratings at about 4.74 stars. It combines quality with a mid range price.
- **Price ≠ satisfaction**
Price does not automatically mean better ratings. Cuisinart is expensive but rated lower than some cheaper brands.
- **Ratings are stable**
Ratings stay stable over time, so changes in market share are not driven by quality differences.

What Drives Market Share?

Reading the chart: The bars to the right side of zero means increased demand. the bars on the left means decreased demand. Window and compact styles have the best effects due to its practicality. Rotisserie and dual basket styles have negative effects due to them catering to a smaller group of customers.

The model

This chart shows the estimated coefficients from the logit demand model. We obtained it by running regression on the log market share. The model has controls for brand and year to account for differences in quality and overall demand. Each bar represents how a feature or rating affects the demand.

$$\beta_{\text{price}} = -0.0377$$

A \$10 price increase reduces market share by ~31%

Why the sign matters

The negative sign matters because it shows that the demand slopes downwards. It is what is expected.

Unit Costs, Markups & Profitability

Price vs. Unit Cost

Costs move closely with prices. All brands sit above the 45° line. This means that every brand is charging more than its cost and their earnings are positive.

Unit Cost by Brand (KDE)

Cuisinart and Oster are both in the \$160 to \$200 range. Budget brands like Dash and Ultrean are under \$50. Overall, there is a gap between low end and premium products

Markup Distribution

Markups are centered around about 28% and don't vary much across brands. This could suggest that margins are tight and pricing competition is strong.

Brand	Avg Price	Unit Cost	Markup	Share-Wtd Profit	Interpretation
Ninja	\$145	\$112	\$33	6.31 ★ #1	Highest share + mid price = best profit conversion
Instant Pot	\$104	\$72	\$33	6.01	Strong cross-category brand recognition drives volume
GoWise USA	\$87	\$56	\$31	4.61	Declining share eroding a once-dominant position
Cuisinart	\$224	\$195	\$29	2.50	High margin per unit, low volume → premium niche only
Oster	\$189	\$162	\$27	0.68 ↓	Lowest profit index → premium price without the share

Five key findings.

Air Fryer Market

AI was used to format this slideshow

01 Market Structure

The market for air fryers ranges from \$55 to \$230. No brand stays on top for long. GoWise, who used to have 29% market share dropped to 5%. This shows how quickly the positions in this market can change. On the other hand, Cosori and Instant Pot have been the biggest gainers.

02 Demand & Price

The model ($R^2 = 0.76$) shows a price coefficient of -0.0377 . This means that a \$10 increase in price reduces market share by about 31%. This means that all brands face price sensitivity, so none have a clear advantage when it comes to the pricing.

03 Product Features

Window and compact styles have the best effects due to its practicality. Rotisserie and dual basket styles have negative effects due to them catering to a smaller group of customers.

04 Costs & Margins

Markups are tight, about \$27 to \$33 for all brands, which means strong competition on pricing. Because of this, success looks like it depends more on product differences and branding than on pricing.

05 Competitive Position

Ninja and Instant Pot performs best because they sell a high volume and not because they have higher margins. Oster is in the weakest position. It has higher costs, declining market share, and the lowest profit index compared to the other brands.
